

## Biodegradation Process:

# Eco Best Technology®

PROTECTION & PRESERVATION IN ONE

## WHAT IT IS:

Our Eco Best Technology® (EBT) is the breakthrough innovation that makes our gloves fully biodegradable, sustainable and the first of their kind.

## HOW IT WORKS:

When disposed in landfills, microorganisms consume, metabolize and break down EBT materials into three natural compounds—organic soil, methane and carbon dioxide. This creates fertilizer, leaving zero waste behind.

## WHERE IT GOES

EBT requires biologically active landfills for biodegradation. Which means gloves with EBT cannot even begin to biodegrade prior to disposal. These abilities have been validated by independent certified laboratories using ASTM International test methods (ASTM D5511).

## WHY IT'S IMPORTANT:

Consider the number of disposable gloves used every day in hospitals, offices, schools, warehouses, labs and even our own homes. The numbers are astronomical. With EBT, we help preserve the planet by accelerating each glove's bio-degradation process by up to 100 years\*. And every glove makes a difference.

*\*depending on climate and location of landfill*
